Hägglunds

Hägglunds are Swedish dual-cab, medium class, over-snow vehicles which can carry four passengers in the front cab. They have a towing capacity of 2 tonnes on suitable sleds, and they operate over most snow and ice terrain including sea ice and soft snow.

A minimum thickness of 50 cm of hard ice is required before a Hägglunds can be driven across sea ice. The operational range of a Hägglunds is approximately 250 km, dependent on speed, load and the type of terrain encountered. Illustration by Nick Cartwright.
