AMPHIPODA HYPERIIDEA

OF THE

AUSTRALASIAN ANTARCTIC EXPEDITION.

By K. H. BARNARD, D.Sc., F.L.S. (South African Museum, Cape Town).

I am much indebted to Sir Douglas Mawson for the opportunity of examining the Hyperiid Amphipoda of the Australasian Antarctic Expedition. The collection is a small one containing only seven species; but every additional locality record of these pelagic species is valuable and the data connected with their capture should be published. Unfortunately these data are not as full and precise as could be desired. The collection was originally submitted to the late Dr. Chilton, and it seems that after his death several of his MSS. notes, which probably would have afforded supplementary details, went astray.*

I have also to thank Prof. G. E. Nicholls for forwarding the collection and supplying me with information.
